- Microservice
- Capstone Project

Note: You can choose either **frontend (FE → React → DSA)** or **backend (FE → Springboot → DSA)** for your 6-month journey, and complete the other module in the next phase.

Backend (SpringBoot)

Movie Booking Application

A movie booking application that lets users view, add, and retrieve movies using unique IDs, ensuring smooth management and data integrity.

Expense Manager Application

An Expense Manager application that helps users easily track and manage income and expenses by categorizing earnings (such as salary, bonus, and consultancy) and spending (including food, education, bills, and miscellaneous).

Secure Online Banking Application

A Bank Security Application that provides essential banking services such as account creation, card selection, and investments, with an admin panel for managing user and account details.

E-Voting Application

An online voting system that enables users to create elections, cast votes, and monitor results.
