1. 🤖 AI Code Review Platform (RAG + LLMs)

https://github.com/fhsinchy/code-review-assistant

---

2. 🚕 Uber Backend (Ride Booking System)

This is one of the better community projects because it goes beyond authentication.

Features:

- Driver Matching
- Payment Service
- Notifications
- Redis Location Streams
- PostgreSQL + PostGIS
- gRPC
- Pub/Sub
- Microservices

GitHub link:

https://github.com/richxcame/ride-hailing

---

3. 🎬 Netflix Backend (Streaming Platform)

One of the clean Spring Boot implementations:

Spring Boot Backend

Repository: https://github.com/OshithRoshantha/netflix-clone

Features:

- Authentication
- Video Management
- User Profiles
- REST APIs
- MySQL
- Spring Boot

If you want a much more advanced architecture, this one is even better:

Streamverse

Repository:

https://github.com/thromel/streamverse

Includes:

- JWT Authentication
- Recommendation Engine
- Search
- Profiles
- Subscription Plans
- Three-tier architecture

---

4. 🛒 Amazon-style E-commerce (Microservices)

I actually recommend **not cloning Amazon directly**.

Instead, study Microsoft's reference architecture.

It covers:

- Product Service
- Order Service
- Payment
- Inventory
- Event Bus
- Microservices
- Docker
- Kubernetes

Repository:

https://github.com/dotnet/eShop

This is considered one of the best microservices learning repositories.

---

5. 🤖 AI + RAG Backend

This is probably the best open-source RAG starter.

Repository:

https://github.com/ajac-zero/example-rag-app

Includes:

- FastAPI
- RAG
- Semantic Search
- Observability
- Docker
- Production Architecture
- LLMOps
